

The Social Media Multiplier

How to post everywhere without doing double the work.

✦+ THE INKWELL REPOSITORY

DIGITAL STRATEGY GUIDE

The Main Idea: Work Once, Post Everywhere

Social media should be a window into your workshop — not a second full-time job. Most creators burn out not because they lack ideas, but because they're treating every platform as a separate task. Every post feels like starting from scratch. The TikTok needs its own caption. The Instagram needs its own photo. The Substack needs its own essay. By the end of the week, you're exhausted and your content calendar is still empty.

The real shift is this: **stop thinking about "making a post" and start thinking about "documenting the process."** One video, one story draft, one behind-the-scenes moment — that's your "Source." And that single Source can feed your entire network without requiring you to create something new for each platform. You're not multiplying your workload. You're multiplying your reach.

Think of it like this: when you sit down to work on a mask rehaul or draft a new lore snippet for the Anatomia Archive, you're already creating something worth sharing. The camera rolling in the corner, the paragraph you wrote for yourself, the finished piece on your desk — those aren't just steps in your creative process. They *are* the content. You don't need to stage a separate "social media moment." You just need to capture what's already happening and then shape it differently for each audience.

This guide walks you through a four-part system: finding your Source, splitting it three ways, handling cross-platform etiquette, and batching your content so you're never scrambling. By the end, you'll have a repeatable workflow that turns one afternoon of work into a week's worth of posts — across every platform that matters to your audience.

One Source

Start with a single high-quality piece of content — a video, a story draft, or a capture from your creative process.

Three Splits

Break that Source into a Teaser, a Deep Dive, and a Gallery post — each tailored to a different platform and audience.

Zero Burnout

Batch your content in one sitting, schedule it out, and let the system run while you focus on the work you love.

Step 1: The "Golden" Source File

Everything starts with one high-quality piece of content — your Source. This is the raw material that will be reshaped, trimmed, and repurposed across every platform you use. The key word is *raw*: it doesn't need to be polished or perfect. It just needs to be real, and it needs to be captured well. A 60-second clip of you working through a mask rehaul, a desk tour of your writing space, or a single paragraph of lore for the Anatomia Archive — any of these can serve as your Source. The format doesn't matter as much as the authenticity. Your audience wants to see the work, not a performance about the work.

There are three types of Source files that work particularly well for creators in the workshop and writing space. Each one captures a different dimension of your creative life, and each one can be split into multiple posts across your platforms.

The Workshop Clip

Sixty seconds of a mask rehaul, a "desk tour" of your writing space, or any moment that shows your hands actually working. This is your most versatile Source — it can become a Reel, a blog header image, a still for Instagram, and a clip for TikTok all at once. The key is to let the camera roll while you work naturally. Don't stop to "perform" for it. The best workshop clips feel like you forgot the camera was there.

The Story Draft

A single paragraph or a "lore" snippet for the Anatomia Archive — something written with care that reveals your world-building or creative thinking. This text can become a Substack post, a caption, a quote graphic, or even a voiceover for a video. Written words carry a different kind of weight than video, and they resonate deeply with the readers who follow your work long-term.

The Capture

Always record in the highest quality your phone or Canon SL3 allows. You can always compress or lower the quality later for a specific platform, but you can never recover detail that wasn't captured in the first place. A blurry video will never look professional, no matter how good the editing is. Good lighting and steady framing matter more than expensive gear — a phone propped on a stack of books in natural window light often beats a poorly lit studio setup.

- ❏ **Pro tip:** Create a folder on your phone or computer labeled "Source Files." Every time you capture something worth keeping, drop it in there. Over time, this becomes your content vault — and you'll never stare at a blank screen wondering what to post.

Step 2: The 3-Way Split — The Multiplier

Once you have your Source, the real magic happens. You don't post the same thing everywhere — you *adapt* it. Each platform has its own culture, its own audience expectations, and its own algorithm. What works as a 15-second hook on TikTok will feel shallow on Substack. What works as a long-form essay on Substack will never get seen on Instagram without a visual anchor. The Multiplier is about respecting those differences while still doing the work only once.

Here's how your single Source breaks down into three distinct posts, each serving a different purpose and reaching a different part of your audience. Think of these as three "Holdings" — each one protecting and growing a different relationship with your followers.

The Teaser

Platforms: TikTok / Instagram Reels

Take the most exciting 15 seconds of your video. Add a trending but subtle sound. This is your "handshake" to find new people — it's designed to stop the scroll and make someone who has never heard of you want to know more. Keep it punchy, keep it visual, and always end with a reason to follow or click through. The Teaser is your top-of-funnel content: its only job is to get attention.

The Deep Dive

Platforms: Substack / Blog

Use the raw story text or the "how-to" details behind the mask rehaul. This is for your core fans who want to know the *why* behind the work — the decisions, the mistakes, the inspirations. Long-form content builds trust and loyalty in a way that short clips never can. Your Deep Dive is where your audience becomes a community. It's also the content you can link to from every other platform, making it the anchor of your entire content ecosystem.

The Gallery

Platforms: Instagram / Facebook

A high-quality still photo of the finished product. This acts as your digital portfolio — a visual record of what you make and how you think. Gallery posts tend to have the longest shelf life of any format. People save them, share them, and come back to them months later. Pair your Gallery post with a short caption that points people to your Deep Dive for the full story, and you've created a content loop that keeps people moving through your ecosystem.

The Workflow: From One Idea to Many Posts

The entire Multiplier system runs on a simple, repeatable workflow. You don't need to be online every day. You don't need to brainstorm fresh ideas for each platform. You just need to follow the same four steps every time you create something worth sharing. Here's what that looks like in practice, from the moment you sit down to work to the moment your content is live across your network.

Notice that "Create" is the only step that requires you to be in a creative headspace. The other three — Split, Schedule, and Publish — are mechanical. You can do them in sweatpants on a Sunday afternoon with a cup of coffee. That's the whole point: protect your creative energy for the actual work, and treat the distribution as a system that runs on its own.

Let's walk through a concrete example so you can see how this plays out in a real week. Imagine it's Tuesday afternoon and you're working on a mask rehaul in your studio. You set your phone on a tripod, hit record, and let it run for about 90 seconds while you work. You don't talk to the camera. You don't explain what you're doing. You just work. That 90-second clip is your Source.

On Wednesday evening, you sit down for 30 minutes and do the Split. You trim the most visually interesting 15 seconds for your TikTok Teaser and add a trending sound. You pull a still frame from the video for your Instagram Gallery post and write a two-sentence caption. You open your Substack and write three paragraphs about why this particular mask matters to the Anatomy Archive — the history, the technique, the creative decision behind it. That's your Deep Dive. You've now created three distinct posts from one recording session.

On Thursday morning, you Schedule everything. The Teaser goes out Friday evening when TikTok traffic peaks. The Gallery post goes live Saturday morning. The Deep Dive publishes Sunday. You've covered an entire weekend of content from one Tuesday afternoon of work. And while those posts are going live, you're free to be in the studio creating the next Source.

Step 3: Cross-Platform Etiquette

Posting across multiple platforms isn't just about repurposing content — it's about showing up consistently and respectfully on each one. There are a few key rules that separate creators who grow from creators who get quietly buried by algorithms. These aren't complicated, but they're easy to overlook when you're moving fast. Build them into your workflow from the start and they'll become second nature.

The Name Check

Make sure your handles are consistent across every platform. If a fan finds you on TikTok as **@InkwellRepo**, they should be able to type that exact name into Instagram and find you instantly. Inconsistent handles create friction — and friction loses followers. If your ideal handle is taken on one platform, add a simple modifier like "official" or "studio" rather than using a completely different name. The goal is to make it effortless for someone to follow you everywhere.

The Watermark Trap

Always post original files to each platform whenever possible. If you post a video on Instagram that still has the TikTok watermark, the algorithm may deprioritize it — Instagram literally doesn't want to promote a competitor's branding. The same goes in reverse. Export clean, watermark-free files from your editing app and upload them natively to each platform. It takes an extra 30 seconds and can mean the difference between reaching 500 people and 5,000.

The Link in Bio

Every post should have a purpose. Are you sending people to your Substack? To your workshop store? To a specific blog post? Make sure the link in your profile is updated and working before you publish. A post without a destination is a missed opportunity. Consider using a link-in-bio tool that lets you rotate links or host multiple destinations so you're never stuck with a single URL.

3

Platforms to Prioritize

Focus on three platforms maximum. Spreading yourself across six or seven guarantees mediocre presence everywhere.

15s

Teaser Length

The ideal hook length for TikTok and Reels. If you can't capture attention in 15 seconds, edit harder.

1

Source File Per Session

You only need one great Source per creative session to fuel an entire week of content across all platforms.

Step 4: The Batch Secret

Don't try to post every day in real-time. That approach requires you to be "on" constantly — creatively available, technically ready, and emotionally present every single day. It's unsustainable, and it's the fastest path to burnout. The creators who post consistently aren't more disciplined than you. They've just built a system that separates *creating* from *publishing*.

The Batch Secret is simple: spend one afternoon creating and scheduling a week's worth of content. Record two or three Source clips. Write two Deep Dives. Capture a handful of still photos. Then sit down with your scheduler — or just organize a folder on your phone labeled "Ready to Post" — and map out when each piece goes live. When life gets busy with school, the studio, or everything else pulling at your attention, you'll have a vault of content ready to go. No panic. No last-minute posts. No posting something mediocre just because you feel guilty about skipping a day.

A batching session doesn't need to be elaborate. Set a timer for two hours, put your phone on Do Not Disturb, and treat it like a studio session. You're not "doing social media." You're documenting your work — which is what you'd be doing anyway. The only difference is that this time, you're being intentional about capturing it in a way that can be shared.

Platform-by-Platform Breakdown

Each platform in your ecosystem plays a specific role. Understanding what each one is *for* — in the context of your work as a creator — helps you make smarter decisions about what to post where. You don't need to be everywhere. You need to be **strategic** about where you are. Here's how the three core Holdings break down by platform, audience, and content type.

Platform	Best For	Content Type	Posting Cadence
TikTok	Discovery	15-second Teaser clips with trending audio	3–5x per week
Instagram Reels	Discovery + Portfolio	Short video + high-quality still photos	4–5x per week
Substack	Community Building	Long-form Deep Dives, lore, process essays	1–2x per week
Facebook	Community + Archive	Gallery posts, event updates, longer captions	3–4x per week
YouTube	Evergreen Content	Extended workshop clips, tutorials, behind-the-scenes	1x per week or biweekly

Notice that the platforms cluster into two groups: **discovery platforms** (TikTok, Reels) where the goal is to reach new people, and **community platforms** (Substack, Facebook, YouTube) where the goal is to deepen relationships with people who already know you. Your Teaser content lives on discovery platforms. Your Deep Dive and Gallery content lives on community platforms. You're not posting randomly — you're guiding people through a journey from "I just found you" to "I'm a loyal follower."

Discovery First

Use TikTok and Reels to cast a wide net. These algorithms favor new creators and can push your content to people who've never heard of you. Lean into trends, but keep them relevant to your niche.

Community Second

Use Substack and Facebook to deepen the relationship. These are the platforms where your most engaged followers live. Give them the full story, the context, and the behind-the-scenes they can't get anywhere else.

Always Cross-Link

Every platform should point somewhere. Your TikTok bio links to your Substack. Your Instagram caption links to your latest blog post. Your Substack footer links to your shop. Create a web, not a collection of isolated islands.

Tools & Resources to Make It Easy

You don't need expensive software or a dedicated social media team to run the Multiplier system. The tools below are either free or low-cost, and they're designed to reduce friction — not add to your workload. Pick one tool from each category and build it into your batching session. Consistency with a simple system beats complexity every time.

Scheduling Tools

Later, Buffer, or Meta Business Suite (free) let you schedule posts across Instagram, Facebook, and TikTok in advance. Set aside 30 minutes during your batch session to load everything up, and your content goes live automatically while you're focused on other things. Meta Business Suite is completely free and handles both Instagram and Facebook, making it a great starting point.

Editing Apps

CapCut (free) is the go-to for mobile video editing. It handles trimming, captions, trending sounds, and watermark-free exports — everything you need to turn a raw Source clip into a polished Teaser in under 10 minutes. For desktop editing, **DaVinci Resolve** is free and professional-grade if you want more control over color and audio.

Content Organization

A simple folder system on your phone or computer is all you need. Create folders labeled "Source Files," "Ready to Post," and "Published." Inside "Ready to Post," create subfolders for each platform so you always know what's queued and where it's going. If you prefer apps, **Notion** or **Airtable** can turn this into a visual content calendar.

Link-in-Bio Tools

Linktree, Beacons, or Carrd let you host multiple links in one place — so your bio never goes stale. Update it during your batch session to point to your latest Deep Dive, your shop, or your current project. A rotating link-in-bio keeps your profile feeling fresh even when you're not actively posting.

Remember: The best tool is the one you'll actually use. If you're just starting out, use your phone's native camera app, a free scheduler, and a simple folder system. Add complexity only when your current system can't keep up with your output.

Your Action Plan: Start This Week

The Social Media Multiplier only works if you use it. Here's a simple, no-excuses action plan to get you running this week. You don't need to implement everything at once. Start with one Source, one Split, and one post. The system will grow with you.

1 Pick Your Source

This week, record one thing. A 60-second clip of you working. A paragraph of lore. A photo of something you made. That's it. Don't overthink it — just capture something real.

2 Do the 3-Way Split

Take that Source and create three posts: a 15-second Teaser for TikTok or Reels, a short Deep Dive for Substack or your blog, and a Gallery photo for Instagram. Spend no more than 90 minutes on this step.

3 Schedule Everything

Load your three posts into a scheduler or drop them in a "Ready to Post" folder with dates assigned. Space them out over the next five to seven days. You've now created a week of content from one session.

4 Check Your Handles and Links

Spend 10 minutes making sure your username is consistent across platforms and that your link-in-bio is working and pointing somewhere relevant. This is a one-time setup that pays off every time someone discovers you.

5 Repeat Next Week

That's the whole system. Create, Split, Schedule, Repeat. After four weeks, you'll have a content vault, a consistent posting rhythm, and a growing audience — without ever feeling like social media is a second job.

Social media should be a window into your workshop, not a second full-time job. Document the process. Share the work. Let the Multiplier do the rest.
